

Notice : How to place your wall stickers

Clean the surface

It is important to remove dust, smudges and fat to prevent any peeling and defects in placement. If your surface is fat (Kitchen wall, ...) degrease it. If your surface is dusty, clean it with a damp sponge. After cleaning, be sure to rinse and let dry

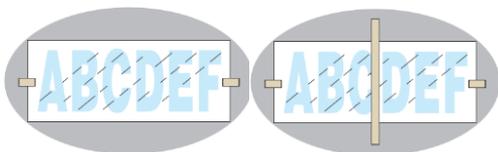

Ensure that the transfer paper adheres properly to the sticker

Place your sticker on a flat surface (transfer paper upwards) and drag the squeegee (or a credit card) on the sticker

Place temporarily the sticker to the desired position

Take your sticker (with the transfer paper and adhesive protection) and place it to the desired position with masking tape.

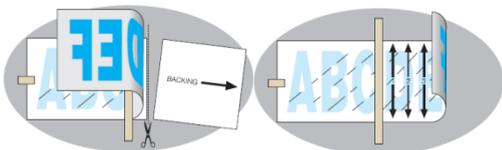

Take step back and make sure that the sticker is positioned at the desired place. Paste then masking tape in the middle of your sticker.

Final placement of your sticker

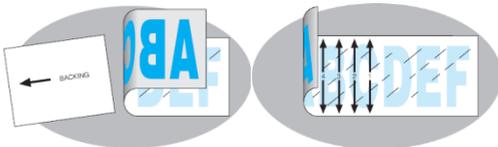

On half of your sticker, peel off the adhesive protection (rear part) and cut the adhesive protection using scissors.

Then drag your squeegee (or a credit card) from the middle of the sticker to the outside.

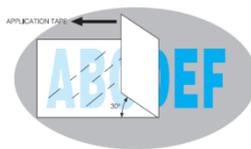

Note : If the place of installation is not plane. Do not use a squeegee, but prefer a clean cloth

Remove the central masking tape and the rest of the adhesive protection. Then drag your squeegee from the middle of the sticker to the outside

Next, remove the transfer paper at the front of the sticker with an angle of maximum 30°.

If there are air bubbles, try first to drag outwards from the sticker and if you are unable to eliminate them, drill the bubble with a fine needle and pass the squeegee to flatten the sticker.

*Thank you for choosing
Stickers*
